Dear Hiring Manager,

I am a B.Tech student in Artificial Intelligence at SVNIT Surat, applying for the Machine Learning / Generative AI Internship position. I am interested in building practical ML systems and applying generative AI models to real-world problems.

I have experience developing end-to-end machine learning pipelines, including data preprocessing, feature engineering, model training, evaluation, and deployment. My projects include building recommendation systems and ML-based decision support systems with a focus on robustness, reproducibility, and careful error analysis. I am comfortable with Python, scikit-learn, model evaluation techniques, and API-based deployment workflows.

I am particularly interested in generative AI, large language models, and adapting foundation models for domain-specific applications. I value disciplined experimentation, strong fundamentals in algorithms and probability, and writing clean, maintainable code.

I am eager to contribute to your team while continuing to deepen my understanding of machine learning and generative AI in production environments. Thank you for your consideration.

Sincerely,
Md Aftab Siddiqui
